

(Internal only) Teleconference with Hartz Mountain Industries to discuss TCVP.

On May 6, 2020, PRD and HED spoke with representatives of Hartz Mountain Corporation to discuss tetrachlorvinphos (TCVP). The registrant presented their internally calculated cancer and non-cancer risk estimates for select pet care products containing TCVP and discussed the schedule for the upcoming revised human health risk assessment with the agency. Tetrachlorvinphos is an organophosphate insecticide registered for use in livestock, as a perimeter treatment and residential use to treat fleas and ticks on cats and dogs. Formulations include pump sprays, powders, and pet collars (Patricia Biggio, 703-347-0547).
